Code the Future Program

Code the Future powered by IBM Bob is an innovation program designed for tech enthusiasts, including university students and professionals, to explore the potential of AI in solving real-world challenges.

By leveraging **IBM Bob as the AI-powered partner**, participants will gain hands-on experience in transforming ideas into practical, impactful solutions while collaborating with a community of innovators, industry experts, and fellow technology enthusiasts.

Code the Future Journey

01
Learning Sessions Webinar

- General Session: Wed, 7 Oct 2026
- Beginner Session: Tue, 13 Oct 2026
- Advanced Session: Thu, 15 Oct 2026

02
Pre-Discussion Proposal

1:1 session with Mentor (Online)

- 30-60 minutes session with mentor
- Subject to availability between 13 - 16 Oct 2026

03
Proposal Submission

Deadline on 20 October 2026

Proposal submission based on the chosen problem statement from the tracks

04
Mentoring Session (Hybrid)

Only 500 Bob Coin Distribution per team *(or per person only for individual participation)*

- Beginner Mentoring: Tue, 27 Oct 2026
- Advanced Mentoring, Thu, 29 Oct 2026

05
Build Week

3-Day time to turn the idea into innovation

2nd Week of November 2026

06
Proposal & Demo Submission

Beginner

- Final proposal & demo (prototype)

Advanced

- Final proposal & demo (app)

07
Grand Final Announcement

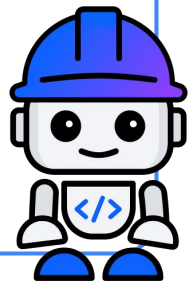

20 November 2026

3 team of Beginner & 3 team of Advanced will be shortlisted for the grand final presentation

08
Experience Day

Grand final presentation pitch

4th Week of November 2026

Beginner Track

Code the Future Program

- Beginner Track is open to active undergraduate students (Diploma/D3/D4/S1) enrolled in registered universities across Indonesia and non-IT/tech professionals.
- Participant can join the competition as individual or team
- Every team consists of a maximum of 5 people
- All team members need to be registered on www.code-thefuture.com
- All team members are encouraged to attend every learning sessions/pre-discussion proposal/mentoring

Beginner Track

Problem Statement Theme 1

AI-Powered Mini Games & Interactive Experience

Context

Games are one of the most engaging forms of digital entertainment and interaction. With AI, creators can rapidly design dynamic gameplay, intelligent characters, and personalized experiences without extensive game development resources.

Problem Statement

How might we use AI to create fun, engaging, and playable mini-games that deliver unique experiences for players?

Potential Area of Innovation

- Text-Based RPGs & Choice-Driven Adventure
- Gamified Habit Trackers & Campus RPGs
- Educational Mini-Games
- Interactive AI Storytelling
- etc.

Example Outputs:

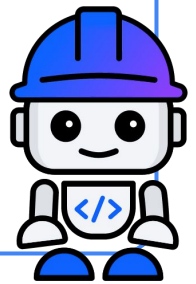

- Campus Survival RPG
- AI Dungeon Adventure
- Language Learning Game
- etc.

Prototype Solutions Format

Web Apps | Mobile Apps | Browser Mini-Games | Interactive Bots | etc.

Applicable Industries

Education | Entertainment | Gaming | Lifestyle | Campus Life | EdTech

Problem Statement Theme 2

Smart Campus Matchmaker & Communities

Context

University life is more engaging when students can easily connect with peers, discover communities, and access opportunities that match their interests and goals. AI can help foster meaningful connections and create a more connected campus experience.

Problem Statement

How might we use AI to help students connect, collaborate, and engage with campus communities and opportunities?

Potential Area of Innovation

- Interest-based Matchmaking
- Study Group Discovery/Community Building
- Event & Community Discovery
- etc.

Example Outputs:

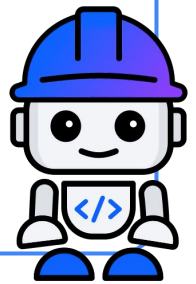

- Study Buddy Finder
- Campus Event Discovery App
- Freshman Networking Finder
- etc.

Prototype Solutions Format

Web Apps | Mobile Apps | Browser Mini-Games | Interactive Bots | etc.

Applicable Industries

Education | Entertainment | Gaming | Lifestyle | Campus Life | EdTech

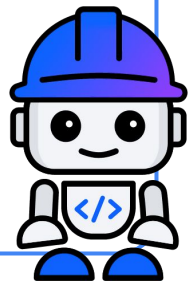

Beginner Track Proposal Output

Proposal in 5 Slides which covers:

- Problem Identification
- Target Audience
- Innovation Concept
- IBM Bob Utilization
- Expected Impact

Final Submission on 20 October 2026

Beginner Track Proposal Assessment

30%
Problem & Solutions Relevance

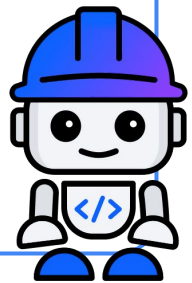

- **Problem Relevance:** Alignment of the identified problem with the selected theme.
- **Solution Effectiveness:** Ability of the solution to address the core problem.
- **User-Centricity:** Understanding of target users and their needs.

40%
IBM Bob Utilization (Primary)

- **Bobalytics / Log Verification:** Evidence of meaningful IBM Bob utilization throughout the development process *(if any)*.
- **Multi-Mode Utilization:** Effectiveness in leveraging IBM Bob's capabilities to develop solution logic and functionality.
- **Code Generation Quality:** Quality of generated code and effectiveness of prompts used.

30%
Innovation & Creativity

- **Concept Originality:** Uniqueness of the proposed solution compared to existing alternatives.
- **Functionality & User Experience:** Quality of interaction, logic, and overall user experience.

Problem Statement Theme 1
App Modernization & Enhancement

Participants will receive a legacy application repository provided by IBM and are expected to modernize, enhance, or transform it using IBM Bob

Context
Many organizations continue to rely on legacy applications that are difficult to maintain, scale, and enhance. Modernizing these systems often requires significant time and resources, slowing innovation and digital transformation efforts.

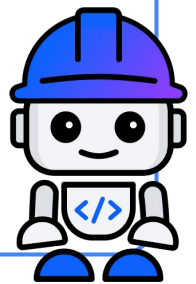

Problem Statement
How might we use IBM Bob to modernize, optimize, and enhance a legacy application while improving its business and technical value?

Potential Area of Innovation
- Code Refactoring & Optimization
- Application Modernization
- Security Enhancement
- Architecture Improvement
- etc.

Expected Impact:
- Reduce Technical Debt
- Improve Application Performance
- Better Maintainability & Scalability
- Enhance Security & Reliability
- Accelerate Digital Transformation

Prototype Solutions Format
Modernization Enterprise App | Web App | Mobile App | AI Agent | SaaS Platform | Automation Solution

Applicable Industries
Banking & FSI | Telco | Healthcare | Manufacture | Retail & ECommerce | Enterprise | etc.

Problem Statement Theme 2
App Modernization & Enhancement

Context

Organizations are constantly seeking smarter ways to improve efficiency, enhance customer experiences, and adapt to changing business needs. AI can help accelerate innovation and drive meaningful business impact.

Problem Statement

How might we leverage AI to transform business processes, improve productivity, and create measurable value for organizations and their customers?

Potential Area of Innovation

- Workflow Automation
- Employee Productivity Assistant
- Customer Service Transformation
- Sales Intelligence Dashboard
- etc.

Expected Impact:

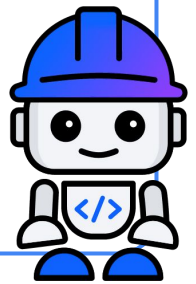

- Reduce Manual Task
- Faster Decision-Making
- Increase Productivity
- Enhanced Operational Efficiency
- Improved Customer Experience

Prototype Solutions Format

Enterprise App | AI Agent | SaaS Platform | Web App | Mobile App | Business Intelligence Platform | etc.

Applicable Industries

Banking & FSI | Telco | Healthcare | Manufacture | Retail & ECommerce | Enterprise | etc.

Advanced Track Proposal Assessment

30% Solutions Quality & Innovation

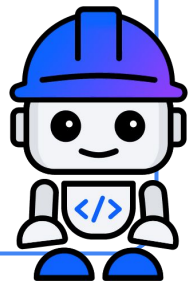

- **Code Quality & Architecture:** Code maintainability, scalability, and overall system design.
- **Refactoring Effectiveness (Theme 1):** Ability to modernize legacy applications while preserving core functionality.
- **Technical Innovation (Theme 2):** Complexity, reliability, and effectiveness of AI-driven features.

40% IBM Bob Utilization (Primary)

- **Bobalytics / Log Verification:** Evidence of active development using monitored repositories and IBM Bob *(if any)*
- **Automation Integration:** Utilization of IBM Bob for testing, refactoring, and documentation.
- **Enterprise SDLC Enablement:** Effectiveness of IBM Bob in enhancing development workflow efficiency.

30% Business & Technical Impact

- **Technical Excellence:** Improvement in code quality, maintainability, and solution robustness.
- **Business Value:** Potential to deliver measurable operational efficiency, productivity gains, or business outcomes.

Final Proposal & Demo Output

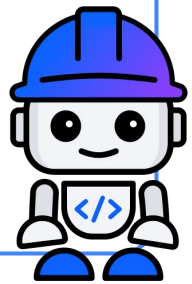

Beginner Track

- Presentation Deck about the Product/Innovation Created, incl. Architecture Explanation
- Working App Prototype
- Min. 3-Minute Demo
  - Gameplay Demo (Theme 1)
  - Walkthrough Feature Demo (Theme 2)

Advanced Track

- Presentation Deck about the Product/Innovation Created, incl. Architecture Explanation
- Functional App
  - Modernized & Enhanced App (Theme 1)
  - Business Solution (Theme 2)
- Min. 3-Minute Demo

Submitted on the 3rd Week of November 2026

Beginner & Advanced Track Final Proposal & Demo Assessment

25%
IBM Bob Utilization

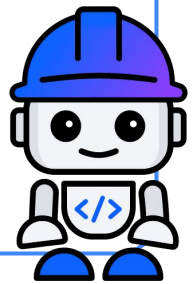

- **Integration Demonstration:** Clear evidence of how IBM BOB was utilized throughout the solution development process.
- **Prompt Engineering Proficiency:** Effectiveness in leveraging IBM Bob to address technical challenges and enhance solution development.

25%
Innovation & Creativity

- **Unique Value Proposition:** Distinctiveness of the solution compared to existing alternatives.
- **Creative Execution:** Quality and creativity of the user experience, interface design, and overall solution approach.

20%
Business/User Impact

- **Impact Potential:** Clarity of value delivered to end users (Beginner Track) or business and operational outcomes (Advanced Track).
- **Market Validation:** Clear identification of the target market and user needs.

Beginner & Advanced Track Final Proposal & Demo Assessment

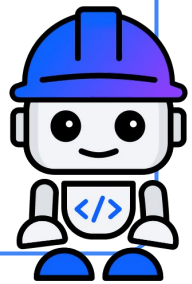

15%
Feasibility & Scalability

- **Production Readiness:** Level of maturity and readiness for real-world implementation.
- **Scalability & Reliability:** Ability to maintain security, performance, and usability as adoption grows.

15%
Presentation & Demo*

- **Live Demo Quality:** Stability and effectiveness of the solution demonstration.
- **Presentation & Q&A:** Clarity of presentation, time management, and ability to address judges' questions effectively.

**Applicable during the Experience Day (Grand Final Presentation).*
